

3. Design System

Step A: Choosing your styling approach

Tailwind + shadcn/ui

Step B: Colour Tokens

Token	Role	Your color (hex)
–color-primary	Links, buttons, nav, active states	#6B8873 (sage green)
–color-accent	Upload, primary actions	#A3B18A (pale sage green)
–color-bg	Background	#FFFFFF (white)
–color-surface	Cards, panels, containers	#F4F6F4 (sage off-tinted white)
–color-text	Body text	#2E3B30 (dark sage)
–color-benign	Result: benign (safe)	#0D9488 (teal green)
–color-malignant	Result: malignant (cancerous)	#DC2626 (red)

Step C: Type Scale

Style	Size	Weight	Used for
Heading	24px	Bold	Screen and section titles
Body	16px	Regular	Paragraphs, forms, lists
Small	13px	Regular	Timestamps, captions, disclaimer text

Step D: Spacing Rule

Base unit: 8px

Tight spacing (between related items): 8px (--space-1)

Standard spacing (between sections): 32px (--space-4)

Screen edge padding: 16px on mobile, 24px on desktop

Step E: Reusable Components

Component	Level	Appears on	Props it takes
Button	atom	everywhere	Variant, onClick, children
Badge	atom	Home, History	Label, confidence
FormField	atom	Login, Profile	Label, value, onChange
Card	molecule	Home, History	Title, children
NavBar	molecule	everywhere	activeRoute

Step F: Responsive Plan

Below 768px (Mobile Phones): single column throughout, collapse into toggleable items (hamburger), vertical display

Above 768px (Desktops): History becomes 2-3 columns, horizontal display

Accessibility Check

- ☐ Sage primary, teal benign, and red malignant colors all pass against white and #F4F6F2
- ☐ Semantic elements: <header>, <nav>, <main> per screen, real <button> for upload/submit
- ☐ Alt text on uploaded lesion images and heatmap overlays
- ☐ Every Login/Profile form input has a matching <label>
- ☐ Full keyboard reachability, visible focus states
